

Technical Regulator Compliance List

The Technical Regulator Compliance List is a list of air conditioners that the Technical Regulator has registered as complying with the demand response requirements in the *Technical Regulator Guideline - Demand response capability requirements for installation of all air conditioning types subject to Greenhouse and Energy Minimum Standards (GEMS) (excluding portable and close control air conditioners), up to a cooling capacity of 19kW Inclusive.*

The list is separated into three categories:

Category 1 - Products that the Technical Regulator has automatically registered as complying with the requirements of the guideline because they are part of the PeakSmart program (PeakSmart program).

A list of eligible Peaksmart products that are part of the Peaksmart program is provided at the following link:

<https://www.energex.com.au/manage-your-energy/cashback-rewards-program/peaksmart-air-conditioning/peaksmart-air-conditioner-models>

Category 2 and 3 - Products that the Technical Regulator has registered as complying with the requirements of the guideline, following an application by the supplier or manufacturer.

Category 2 consists of products that have a demand response capability built into the product that is ready to use as supplied. Category 3 consists of products that are demand response capable (as defined in AS4755.3.1.2012) or potentially demand response capable (as defined in AS3823.2.2011), only if a separate part or component is added to them at installation or in the future.

A list of models products which have been granted temporary exemption follows the list.

**AS/NZS AS4755.3.1.2012 defines demand response capable as "An air conditioner that is supplied with the necessary interface, circuitry and components to fully comply with this Standard.*

Air conditioners that are assembled from components on site are demand response capable if all components necessary to make the assembly demand response capable are supplied with every unit, and the installation instructions require all components to be assembled."

**AS/NZS 3823.2.2011 defines potentially demand response capable as "An air conditioner that is potentially fully compliant with AS 4755.3.1, once a nominated standard part or component, that is not otherwise supplied with every unit, has been added or fitted, either at the time of manufacture or at any subsequent time, e.g. pre-delivery, at installation or after installation."*

Exemptions

The Technical Regulator has granted exemptions for certain air conditioning units to be installed during a specified period, even if they do not meet the demand response capability requirements outlined in the *Technical Regulator Guideline - Demand response capability requirements for installation of all air conditioning types subject to Greenhouse and Energy Minimum Standards (GEMS) (excluding portable and close control air conditioners)*, up to a cooling capacity of 19kW Inclusive, effective from 1 July 2023.

The exemptions are granted under the following terms and conditions:

- The exemption applies to the specified models below that are currently in stock.
- Installation of exempted units must be completed before the exemption expiry date specified.
- Suppliers or manufacturers must have submitted an application for exemption to the Technical Regulator and received approval.
- The exemption is valid for a specific period as determined by the Technical Regulator.
